## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-53, 64, drawn to controlling a transition state (on/off) of an exterior light of a vehicle based on a light source image, classified in class 382, subclass 104.
  - II. Claims 54-57, drawn to an image preprocessing method for processing a pixel based on a selected pixel from one of multiple images, classified in class 382, subclass 274.
  - III. Claims 58-63, drawn to controlling a transition rate (time delay) of an exterior light of a vehicle based on a light source image, classified in class 382, subclass 100.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as image preprocessing. See MPEP § 806.05(d).

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as controlling the time delay of a exterior light source of a vehicle. See MPEP § 806.05(d).

Art Unit: 2623

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as image preprocessing. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
